PROFESSIONAL SUMMARY

Cloud and DevOps Engineer with hands-on experience building and automating AWS infrastructure, containerized applications, and CI/CD workflows. Experience with AWS EC2, VPC, S3, IAM, Lambda, Application Load Balancer (ALB), Auto Scaling Groups (ASG), and Multi-AZ subnet design. Uses Terraform for Infrastructure as Code (IaC), Docker and Docker Compose for containerization, Jenkins and SonarQube for CI/CD and code-quality checks, and AWS CloudWatch and Datadog for monitoring and observability. Practical project experience includes three-tier application deployment, microservices hosting, cloud networking, and high-availability AWS architecture.

TECHNICAL SKILLS

Cloud: AWS EC2, VPC, S3, RDS, IAM, EFS, CloudFront, Lambda, Route 53, ACM, SES, Security Groups
Infrastructure as Code: Terraform, reusable modules, infrastructure provisioning
Containers: Docker, Docker Compose, Docker Hub; Kubernetes (K8s)
CI/CD & Code Quality: Jenkins, multi-stage pipelines, Master-Worker architecture, SonarQube Quality Gates
Monitoring & Operations: AWS CloudWatch, Datadog, Linux (Ubuntu/CentOS), Bash, Shell scripting, log management
Networking & Security: Multi-AZ subnets, ALB, ASG, NAT Gateway, TCP/IP, SSH, CORS
Version Control & Build Tools: Git, GitHub, Maven, npm
Databases: MySQL, MariaDB, MongoDB
Other Cloud Platforms: Microsoft Azure, Google Cloud Platform (GCP)

PROFESSIONAL EXPERIENCE

DevOps Engineer Intern | Hisan Lab Private Limited | Jan 2026 – Present

- Designed and deployed a containerized three-tier microservices application on AWS EC2, using Docker bridge networking for service communication and MariaDB for data storage.
- Configured GitHub webhooks to trigger automated build and deployment workflows on every code commit, ensuring rapid feedback loops for the development team.
- Provisioned AWS VPC infrastructure with modular Terraform, including Multi-AZ subnets, Application Load Balancers (ALB), and Auto Scaling Groups (ASG) to support high availability and scalability.
- Built optimized Dockerfiles using efficient base images, including eclipse-temurin, reducing container image footprint by 40%.
- Implemented event-driven AWS Lambda workflows for database snapshot triggers, log rotation, and S3 object-event processing.
- Configured Kubernetes Horizontal Pod Auto-scaler (HPA) to handle traffic fluctuations and implemented rolling update strategies to ensure high availability and zero-downtime releases.
- Built multi-stage Jenkins CI/CD pipelines using a Master-Worker architecture and integrated SonarQube Quality Gates for static analysis and code-quality checks.
- Established monitoring with Datadog & CloudWatch dashboards and Bash automation for log management and host operations.

PROJECTS

AWS Portfolio Hosting & Serverless Contact Form | Live Portfolio

- Hosted a personal portfolio on AWS EC2 using Apache, Route 53 DNS, and Certbot SSL/TLS.
- Integrated API Gateway with AWS Lambda (Python 3.12) and Amazon SES to automate contact form email notifications.

Production-Grade High-Availability AWS Architecture via Terraform | GitHub Repository

- Automated AWS infrastructure provisioning with reusable Terraform modules, including custom VPCs, Multi-AZ subnets, NAT Gateway, EC2, ALB, and Auto Scaling Groups.
- Configured Nginx web instances to scale with demand; project notes report a 50% reduction in environment setup time and support for traffic spikes up to 3x.

Three-Tier Microservices Application Deployment using Docker Compose & AWS | GitHub Repository

- Deployed a containerized application on AWS EC2 using Docker Compose for Apache, Java 17, and MariaDB services.
- Configured isolated Docker bridge networks for service discovery and AWS Security Groups for controlled cross-tier traffic.

ShopiTry – Microservices E-Commerce Platform | GitHub Repository

- Built a six-service application using Node.js and MongoDB Atlas; hosted services on AWS EC2 and delivered frontend assets through S3 and CloudFront.
- Configured Nginx as a reverse proxy, Let's Encrypt SSL, PM2, and JWT/RBAC-based access controls.
- Project notes report 35% lower backend API latency, 40% faster frontend asset delivery, and 25% shorter deployment rollout time.

EDUCATION

Master of Science in Computer Science (M.Sc. CS Hon's) | Awadhesh Pratap Singh University (APSU), Rewa | 2023 – 2025
Bachelor of Science in Computer Science (B.Sc. CS Hon's) | Awadhesh Pratap Singh University (APSU), Rewa | 2020 – 2023
